THE FUNCTION: REQUIRED FOR THE MORPHOGENESIS AND FOR THE ELONGATION OF THE FLAGELLIN MONOMERS AT THE TIP OF GROWING FILAMENT. FORMS A CAPPING STRUCTURE, WHICH PREVENTS FLAGELLIN SUBUNITS (TRANSPORTED THROUGH THE CENTRAL CHANNEL OF THE FLAGELLIM) FROM LEAKING OUT WITHOUT POLYMERIZATION AT THE DISTAL END (BY SIMILARITY).

-!- SUBGULT: HOMOPENTAMER (BY SIMILARITY).

-!- SUBGELLULAR LOCATION: PETIPLASMIC flagellum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fraser C.M., Casjens S., Huang W.M., Sutton G.G., Clayton R.A. re exudative vasculopathy are associated with mutations in the crumbs
re homologue 1 (CRB1) gene.";
LAM. J. Hum. Genet. 69:198-203(2001).
C. -!- FUNCTION: MAY BE INVOLVED IN CELL-CELL INTERACTION IN NEURONAL
DEVELOPMENT OF THE RETINA.
C. -!- SUBCELLULAR LOCATION: EXtracellular (Potential).
C. -!- TISSUE SPECIFICITY: PREFERENTIAL EXPRESSION IN RETINA, ALSO
EXPRESSED IN BRAIN AND FETAL HRAIN.
C. -!- DISEASE: DEFECTS IN CRB1 ARE THE CAUSE OF RETINITIS PIGMENTOSA
TYPE 12 (RP12), AN AUTOSOMAL RECESSIVE CONDITION WHICH IS
C. -!- DISEASE: DEFECTS IN IGHT BLINDNESS FROM EARLY CHILDHOOD AND
PROGRESSIVE VISUAL FIELD LOSS. THERE IS GENERAL LOSS OF RETINAL
PROGRESSIVE VISUAL INPAIRMENT BEFORE THE RETINA AND PARTIENTS EXPERIENCE
SEVERE VISUAL IMPAIRMENT BEFORE THE AGE OF TWENTY.
C. -!- DISEASE: Defects in CRB1 are a cause of a form of Leber congenital
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=994383939; rupper and de Kok Y.J.M., de Hollander A.I., ten Brink J.B., de Kok Y.J.M., de Hollander A.I., van Driel M.A., van de Pol D.J. van den Born L.I., van Driel M.A., van de Pol D.J. -i- FUNCTION: THIS ENZYME CAN BE CONVERTED FROM THE DEHYDROGENASE FORM (D) TO THE OXIDASE FORM (O) TREVERSIBLY BY PROTEOLYSIS OR REVERSIBLY THROUGH THE OXIDATION OF SULFHYDRYL GROUPS.

-i- CATALYTIC ACTIVITY: Xanthine + NAD(+) + H(2)0 = urate + H(2)0(2).

-i- CATALYTIC ACTIVITY: Xanthine + H(2)0 + O(2) = urate + H(2)0(2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This
